DETAILED ACTION
EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michelle Knight on 2/24/2010.

The application has been amended as follows:

Claim1 (Amended): An apparatus for detecting objects in one or more images captured by an image pickup device mounted on a vehicle, comprising:

(a) memory on which is stored pixels of at least one image captured by the image pickup device; and

(b) a controller operatively coupled to the memory and adapted to compute velocity information for each pixel in an image using a sequential series of images; extract from the image [those pixels] extracted pixels having a velocity component based on the velocity information, wherein the velocity component comprises a movement direction and a movement velocity in a lateral direction; define regions for detecting a road boundary; detect oblique lines made of pixels having a velocity component based on grouping those extracted pixels having a velocity component in the regions; and generate a signal indicative of a road boundary in the image based on the oblique lines.

Claim 25: (Amended) A method for detecting objects in an image captured of the pathway of a vehicle, comprising:

- (a) computing velocity information for each pixel in the image using a sequential series of images;
- (b) extracting from the image ~~these pixels~~ extracted pixels having a velocity component based on the velocity information, wherein the velocity component comprises a movement direction and a movement velocity in a lateral direction;
- (c) defining regions for detecting a road boundary;
- (d) detecting oblique lines made of pixels having a velocity component by grouping the extracted pixels having a velocity component in the regions; and
- (e) detecting one or more boundary lines on the vehicle pathway in the image from the oblique lines.

Allowable Subject Matter

Claims 1-30 are allowed.

The following is an examiner's statement of reasons for allowance: The combination of cited references Shimakage et al (US 7,091,838) and Sasaki et al (US 6,466,684). Shimakage teaches a lane deviation alarm system is comprised of a forward-observed-point calculating section that calculates a forward observed point by multiplying a vehicle speed of a host vehicle and an anticipated deviation time; a forward-observed-point lateral-displacement calculating section that calculates a lateral displacement at the forward-observed-point, on the basis of a yaw angle and the forward-observed-point; a lane deviation tendency determining section that

determines whether the host vehicle is in a lane deviation tendency, on the basis of the forward-observed-point lateral-displacement; and a criteria changing section that changes a criteria for determining a lane deviation tendency of the host vehicle, on the basis of a detecting condition of the lane defining line. Sasaki et al teaches the monitoring system for picking up the front, rear or diagonal-rear view from one's own vehicle by an image pick-up means such as a video camera installed on the vehicle such as a motor car, detecting another vehicle approaching from the front, rear or diagonal-rear direction of one's own running vehicle using the image picked up and giving a warning to a driver.

Neither Shimakage nor Sasaki teaches "*a velocity component comprising a movement direction and a movement velocity in a lateral direction and (3) generating a signal indicative of road boundary in the image based on the oblique line, the oblique lines based on grouping those extracted pixels having a velocity component in the regions.*" No other found prior art of record teaches or fairly suggests the combination of claimed elements.

The Examiner finds no reason or motivation to combine the above references in an obviousness rejection thus placing the application in condition for allowance.

Any comments considered necessary by applicant must be submitted on later than the payment of the issue fee and to avoid processing delays should preferably accompany the issue fee. Such submissions should be clearly labeled, comments on statement of reasons for allowance.
